A WIDE RANGE OF ORBITAL MOTORS

Sauer-Danfoss is a world leader in the production of low speed high torque orbital motors offering more than 1600 different orbital motors, categorized in types, variants and sizes (incl. different shaft versions).

The motors vary in size (rated displacement) from 8 cm³ [0.50 in³] to 800 cm³ [48.9 in³] per revolution.

Speeds range up to approx. 2500 min⁻¹ [rpm] for the smallest type and up to approx 600 min⁻¹ [rpm] for the largest type.

Maximum operating torques vary from 13 Nm [115 lbf-in] to 2700 Nm [24.000 lbf-in] (peak) and maximum outputs are from 2.0 kW [2.7 hp] to 70 kW [95 hp].

Characteristic features:

- Smooth running over the entire speed range
- Constant operating torque over a wide speed range
- High starting torque
- High return pressure without the use of drain line (High pressure shaft seal)
- High efficiency
- Long life under extreme operating conditions
- Robust and compact design
- High radial and axial bearing capacity
- For applications in both open and closed loop hydraulic systems
- Suitable for a wide variety of hydraulics fluids

Frontpage: P300048.tif, P300047.tif, P300047b.tif, P300020.tif, 151-1914.ai

The program is characterized by technical features appealing to a large number of applications and a part of the program is characterized by motors that can be adapted to a given application. Adaptations comprise the following variants among others:

- Motors with corrosion resistant parts
- Wheel motors with recessed mounting flange
- OMP, OMR- motors with needle bearings
- OMR motor in low leakage version
- OMR motors in a super low leakage version
- Short motors without bearings
- Ultra short motors
- Motors with integrated positive holding brake
- Motors with integrated negative holding brake
- Motors with integrated flushing valve
- Motors with speed sensor
- Motors with tachometer connection
- All motors are available with black finish paint

Planetary gears

Sauer-Danfoss complements the motor range with a complete program of planetary gears adapted to suit. The combination of motors and gears makes it possible to obtain smooth running at fractional speeds and with torques up to 650,000 Nm [5,800,000 lbf-in].

The Sauer-Danfoss LSHT motors are used in the following application areas:

- Construction equipment
- Agricultural equipment
- Material handling & Lifting equipment
- Forestry equipment
- Lawn and turf equipment
- Special purpose
- Machine tools and stationary equipment
- Marine equipment

SURVEY OF LITERATURE WITH TECHNICAL DATA ON SAUER-DANFOSS ORBITAL MOTORS

Detailed data on all Sauer-Danfoss motors can be found in our motor catalogue, which is divided into 5 individual sub-catalogues:

- General information on Sauer-Danfoss orbital motors: function, use, selection of orbital motor, hydraulic systems, etc.
- Technical data on small motors: OML and OMM
- Technical data on medium sized motors: OMP, OMR, OMH and OMEW
- Technical data on medium sized motors: DH and DS
- Technical data on large motors: OMS, OMT and OMV
- Technical data on large motors: TMT

A general survey brochure on Sauer-Danfoss orbital motors gives a quick motor reference based on power, torque, speed and capabilities.

SPEED, TORQUE AND OUTPUT

The bar diagrams, see page 5, are useful for a quick selection of relevant motor size for the application. The final motor size can be determined by using the function diagram for each motor size.

- DH can be found on pages 12-16
- DS can be found on pages 32-36

The function diagrams are based on actual tests on a representative number of motors from our production. The diagrams apply to a return pressure between 5 and 10 bar [75 and 150 psi] when using mineral based hydraulic oil with a viscosity of 35 mm²/s [165 SUS] and a temperature of 50°C [120°F]. For further explanation concerning how to read and use the function diagrams, please consult the paragraph "Selection of motor size" in the technical information "General" DKMH.PK.100.G2.02 520L0232.

Ordering

Add the four character prefix "151-" to the four digit numbers from the chart for complete code number.

Example:

151-2000 for an DH 36 with A2-flange, cyl. 1 in shaft, port size $\frac{7}{8}$ - 14 UNF and without drain connection.

Note: Orders will not be accepted without the four character prefix.

	bar [psi] int. ¹⁾	172 [2500]	172 [2500]

¹⁾ 6B splined shaft is recommended for operating torque of 280 Nm [2500 lbf·in] or more.

²⁾ Intermittent operation: the permissible values may occur for max. 10% of every minute.

MAX. PERMISSIBLE SHAFT SEAL PRESSURE

*DH with HPS and
without drain connection:*
The shaft seal pressure equals the
average of input pressure
and return pressure.

$$P_{\text{seal}} = \frac{P_{\text{in}} + P_{\text{return}}}{2}$$

151-1743.10

DH with HPS and drain connection:
The shaft seal pressure equals the
pressure in the drain line.

151-1855.10

Max. permissible shaft seal pressure

PRESSURE DROP IN MOTOR

The curve applies to an unloaded motor shaft and an oil viscosity of 35 mm²/s [165 SUS]

A: DH 80 - 400

B: DH 36-50

OIL FLOW IN DRAIN LINE

The table shows the max. oil flow in the drain line at a return pressure less than 5-10 bar [75-150 psi].

Pressure drop bar (psi)	Viscosity mm ² /s (SUS)	Oil flow in drain line l/min (US gal/min)
100 [1450]	20 [100]	2.5 [0.66]
	35 [165]	1.8 [0.78]
140 [2030]	20 [100]	3.5 [0.93]
	35 [165]	2.8 [0.74]

DIRECTION OF SHAFT ROTATION

151-1874.10

PERMISSIBLE SHAFT LOADS FOR DH

The permissible radial shaft load (P_R) depends on

- speed (n)
- distance (l) from the point of load to the mounting flange
- mounting flange version
- shaft version

Mounting flange	Square flange 2-hole oval flange (US version)
Shaft version	1 in cylindrical shaft 1 in-6B splined shaft
Permissible shaft load (P_R) l in mm	$\frac{650}{n} \times \frac{228000}{87 + l} \text{ N}^*$
Permissible shaft load (P_R) l in inch	$\frac{1460}{n} \times \frac{898}{3.425 + l} \text{ lbf}^*$

* $n \geq 200 \text{ min}^{-1} \text{ (rpm)}$; $l \leq 55 \text{ mm [2.2 in]}$

$n < 200 \text{ min}^{-1} \text{ (rpm)}$; $\Rightarrow P_{R\text{max}} = 6500 \text{ N [1460 lbf]}$, when using above formulas n has to be $200 \text{ min}^{-1} \text{ (rpm)}$.

The curve shows the relation between P_R and n

- when $l = 27 \text{ mm [1.06 in]}$ for motors with oval and square mounting flange

FUNCTION DIAGRAMS

Explanation of function diagram use, basis and conditions can be found on page 4.

- A: Continuous range
- B: Intermittent range (max. 10% operation every minute)

Max. permissible continuous/intermittent pressure drop for the actual shaft version can be found on page 8.

Note: Intermittent pressure drop and oil flow must not occur simultaneously.

Ordering

Add the four character prefix "151-" to the four digit numbers from the chart for complete code number.

Example:

151-2305 for an DS 160 with A2-flange, cyl. 1 in shaft, port size $\frac{7}{8}$ - 14 UNF and without drain connection..

Note: Orders will not be accepted without the four character prefix.

DS 50 - 375	bar [psi] cont.	138 [2000]	138 [2000]
	bar [psi] int. ¹⁾	172 [2500]	172 [2500]

¹⁾ 6B splined shaft is recommended for operating torque of 280 Nm [2500 lbf-in] or more.

²⁾ Intermittent operation: the permissible values may occur for max. 10% of every minute.

MAX. PERMISSIBLE SHAFT SEAL PRESSURE

*DS with HPS and
without drain connection:*
The shaft seal pressure equals the
average of input pressure
and return pressure.

$$P_{\text{seal}} = \frac{P_{\text{in}} + P_{\text{return}}}{2}$$

151-1743.10

DS with HPS and drain connection:
The shaft seal pressure equals the
pressure in the drain line.

151-1855.10

Max. permissible shaft seal pressure

PRESSURE DROP IN MOTOR

The curve applies to an unloaded motor shaft and an oil viscosity of 35 mm²/s [165 SUS]

OIL FLOW IN DRAIN LINE

The table shows the max. oil flow in the drain line at a return pressure less than 5-10 bar [75-150 psi].

Pressure drop bar (psi)	Viscosity mm ² /s (SUS)	Oil flow in drain line l/min (US gal/min)
100 [1450]	20 [100]	2.5 [0.66]
	35 [165]	1.8 [0.78]
140 [2030]	20 [100]	3.5 [0.93]
	35 [165]	2.8 [0.74]

DIRECTION OF SHAFT ROTATION

151-1874.10

PERMISSIBLE SHAFT LOADS FOR DS

The permissible radial shaft load (P_R) depends on

- speed (n)
- distance (l) from the point of load to the mounting flange
- mounting flange version
- shaft version

Mounting flange	Square flange 2-hole oval flange (US version)
Shaft version	1 in cylindrical shaft 1 in-6B splined shaft
Permissible shaft load (P_R) l in mm	$\frac{650}{n} \times \frac{228000}{87 + l} \text{ N}^*$
Permissible shaft load (P_R) l in inch	$\frac{1460}{n} \times \frac{898}{3.425 + l} \text{ lbf}^*$

* $n \geq 200 \text{ min}^{-1} \text{ (rpm)}$; $l \leq 55 \text{ mm [2.2 in]}$

$n < 200 \text{ min}^{-1} \text{ (rpm)}$; $\Rightarrow P_{R\max} = 6500 \text{ N [1460 lbf]}$, when using above formulas n has to be $200 \text{ min}^{-1} \text{ (rpm)}$.

The curve shows the relation between P_R and n

- when $l = 27 \text{ mm [1.06 in]}$ for motors with oval and square mounting flange

FUNCTION DIAGRAMS

151-1909.10

151-1900.10

Explanation of function diagram use, basis and conditions can be found on page 4.

- A: Continuous range
- B: Intermittent range (max. 10% operation every minute)

Max. permissible continuous/intermittent pressure drop for the actual shaft version can be found on page 28.

Note: Intermittent pressure drop and oil flow must not occur simultaneously.

INSTALLATION OF THE SAUER-DANFOSS ORBITAL MOTORS

About the design

- To ensure efficient operation all hydraulic components must be installed according to their individual instructions.
- The pump line must include a gage connection.
- To ensure designed contact and minimize the stress all mounting flanges must be flat.
- Hydraulic lines must be fitted correctly to prevent air entrapment.

About the assembly

- Follow the mounting instructions printed on the inside of the cardboard box.
- To prevent contamination, do not remove the plastic plugs from the connection ports until the fittings are ready to be assembled.
- Check that there is full face contact between the motor mounting flange and the mating part.
- Do not force the motor into place when tightening the mounting screws.
- Avoid unsuitable sealing material on fittings such as pack twine, Teflon and others. Use only bonded seals, O-rings, steel washers and the like.
- When tightening the fittings never use a torque higher than the max. tightening torque stated in the instructions.
- Make sure that the cleanliness of the oil used is better than 20/16 (ISO 4406). Always use a filter for oil refilling.

STARTING UP AND RUNNING IN THE HYDRAULIC SYSTEM

- Through a small-meshed filter fill up the tank with oil to the upper oil level mark.
- Start the drive engine, and if possible, let it work at its lowest speed. If the motor is provided with bleed screws, keep these open until the emerging oil is non-foaming.
- Check that all components are correctly connected (pump following the right direction of rotation etc.).
- In load-sensing systems, also make sure that the signal lines are free of entrapped air.
- Indications of air in the hydraulic system:
 - foam in the tank
 - jerky movements of motor and cylinder
 - noise
- If required, refill with oil.
- Connect the system to a separate tank that includes a filter (fineness max. 10 µm) with twice the capacity of the max. oil flow. Let the entire system run without load (no pressure) for about 30 minutes.
- Do not load the system until it is all bled and clean.
- Check the tightness of the system and make sure that its performance is satisfactory.
- Change the oil filter, and if required, refill with oil.

OPERATION

- Do not expose the motor to pressures, pressure drops and speeds above the max. values stated in the catalogue.
- Filter the oil to ensure that the contamination level 20/16 (ISO 4406) or better.

MAINTENANCE

- When working with hydraulic systems, the main criteria of operating safety and endurance is careful maintenance
- Always renew and replace oil, oil filters and air filters according to the instructions given by the respective manufacturers
- Regularly check the condition of the oil
- Frequently check system tightness and oil level

OUR PRODUCTS

Hydrostatic transmissions
Hydraulic power steering
Electric power steering
Closed and open circuit axial piston pumps and motors
Gear pumps and motors
Bent axis motors
Radial piston motors
Orbital motors
Transit mixer drives
Planetary compact gears
Proportional valves
Directional spool valves
Cartridge valves
Hydraulic integrated circuits
Hydrostatic transaxles
Integrated systems
Fan drive systems
Electrohydraulic controls
Digital electronics and software
Battery powered inverter
Sensors

Sauer-Danfoss Hydraulic Power Systems – Market Leaders Worldwide

Sauer-Danfoss is a comprehensive supplier providing complete systems to the global mobile market.

Sauer-Danfoss serves markets such as agriculture, construction, road building, material handling, municipal, forestry, turf care, and many others.

We offer our customers optimum solutions for their needs and develop new products and systems in close cooperation and partnership with them.

Sauer-Danfoss specializes in integrating a full range of system components to provide vehicle designers with the most advanced total system design.

Sauer-Danfoss provides comprehensive worldwide service for its products through an extensive network of Authorized Service Centers strategically located in all parts of the world.
