## Technical Information

### Using this manual

#### ORGANIZATION AND HEADINGS

To help you quickly find information in this manual, the material is divided into sections, topics, subtopics, and details, with descriptive headings set in **red type**. Section titles appear at the top of every page in **large red type**. Topic headings appear in the left hand column in **BOLD RED CAPITAL LETTERS**. Subtopic headings appear in the body text in **bold red type** and detail headings in *italic red type*.

References (example: See *Topic xyz*, page XX) to sections, headings, or other publications are also formatted in *red italic type*. In Portable Document Format (**PDF**) files, these references represent clickable hyperlinks that jump to the corresponding document pages.

#### TABLES, ILLUSTRATIONS, AND COMPLEMENTARY INFORMATION

Tables, illustrations, and graphics in this manual are identified by titles set in *blue italic type* above each item. Complementary information such as notes, captions, and drawing annotations are also set in *blue type*.

References (example: See *Illustration abc*, page YY) to tables, illustrations, and graphics are also formatted in *blue italic type*. In PDF files, these references represent clickable hyperlinks that jump to the corresponding document pages.

#### SPECIAL TEXT FORMATTING

Defined terms and acronyms are set in **bold black type** in the text that defines or introduces them. Thereafter, the terms and acronyms receive no special formatting.

*Black italic type* is used in the text to emphasize important information, or to set-off words and terms used in an unconventional manner or alternative context. *Red* and *blue italics* represent hyperlinked text in the PDF version of this document (see above).

#### TABLE OF CONTENTS

An indented **Table of Contents (TOC)** appears on the next page. Tables and illustrations in the TOC set in *blue type*. In the PDF version of this document, the TOC entries are hyperlinked to the pages where they appear.

## Directional Control Valves

### Technical Information

### Product overview

#### FLEXIBILITY OF DESIGN

The Sauer-Danfoss directional control valves are designed to give customer flexibility over a broad range of flow and pressure capabilities. Actuator options include a range of levers, cable actuators, hydraulic and pneumatic pilot controls, two-axis joysticks, and electrohydraulic solenoids. Flow rates range from 0 to 100 l/min [26 US gal/min]. Configurations include compact monoblock and flexible modular styles.

#### CIRCUIT OPTIONS

- Parallel circuits
- Series circuits
- Tandem circuits
- Priority circuits
- Regenerative circuits
- Power beyond
- Open center
- Closed center

#### CAPABILITY

- Flow rates from 0 to 100 l/min [26 US gal/min]
- System pressure up to 240 bar [3500 psi]
- Up to 12 work sections for modular valves
- 12 cm<sup>3</sup>/min [0.7 in<sup>3</sup>/min] leakage (0.5 cm<sup>3</sup>/min [0.03 in<sup>3</sup>/min] for 1618)

#### ACTUATION OPTIONS

- Handles and levers
- Mechanical two-axis joystick
- Exposed or covered spool ends
- **Remote Hydraulic Control (RHC)**
- **ElectroHydraulic Control (EHC)** on/off solenoid
- Cable control
- Hydraulic or pneumatic pilot control
- Dual spool ends

---

Refer to the quick selection matrix on pages 12 and 13 for specific options by model.

## Directional Control Valves

### Technical Information

#### Fluids and filtration

## FLUIDS

Hydraulic fluid performs three basic functions in a hydraulic system: It transfers energy, lubricates moving components, and transports heat and contaminants out of the system.

#### Base stock and additives

Sauer-danfoss valves are designed to operate with mineral-based fluids containing oxidation, rust, and foam inhibitors, compatible with fluoroelastomer seals. Consult your fluid supplier for information on seal compatibility.

#### Viscosity

Viscosity is the most important property of a hydraulic fluid. It is a measurement of how the fluid resists flow. Low viscosity fluids increase internal leakage; high viscosity fluids increase pressure drop through the valve. Use a fluid that meets the viscosity limits published in this catalog. For specific requirements, see technical data in each section.

#### Temperature

Temperature affects a fluid's viscosity. Higher temperature fluid has lower viscosity. Operating at excessive temperatures may have other detrimental effects on your hydraulic fluid. Design your hydraulic system to operate within the specified temperature range. Specific requirements are published in each section.

#### For more information

For more information on hydraulic fluid selection refer to *Hydraulic Fluids and Lubricants Technical Information*, Sauer-Danfoss publication **520L0463**.

## FILTRATION

Effective filtration is critical to a hydraulic system's performance and working life. Employ system filtration capable of meeting the published requirements in each valve section. Be aware that other components in the system may have more stringent requirements. Design your filtration system to satisfy the requirements of the most sensitive component.

#### Return line filtration

Return line filtration is generally adequate for Sauer-Danfoss valves. We recommend a 10 micron nominal (20 micron absolute) or finer filter. Insure the filter in your system is properly sized and maintained. To facilitate proper filter maintenance, use a pressure gauge or other indicator to signal when it is necessary to change the filter. Never allow filter to reach its bypass condition. Follow the filter manufacturer's maintenance recommendations.

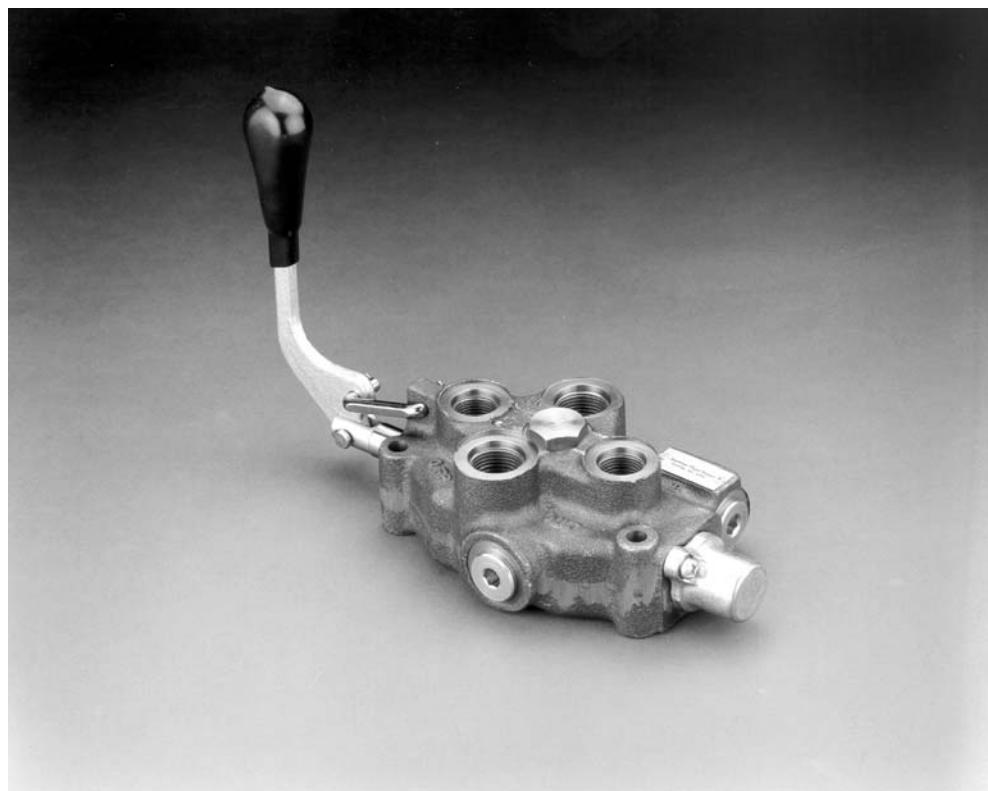

#### Cleanliness

Hydraulic system contamination must not exceed the limits published for each valve. Limits are specified per ISO 4406 (1999). When measuring system contamination, calibrate test equipment in accordance with the ACFTD method.

For more information

For more information on system filtration, refer to *Design Guidelines for hydraulic fluid cleanliness*, Sauer-Danfoss publication **520L0467**.

Directional Control Valves  
Technical Information  
**Model 1612**

**DESCRIPTION**

Single spool monoblock valve. 76 l/min [20 US gal/min] maximum flow. 207 bar [3000 psi] maximum pressure.

**TYPICAL APPLICATIONS**

Sweepers, mowers, agricultural equipment, auxiliary valves, tree removal equipment

**STANDARD FEATURES**

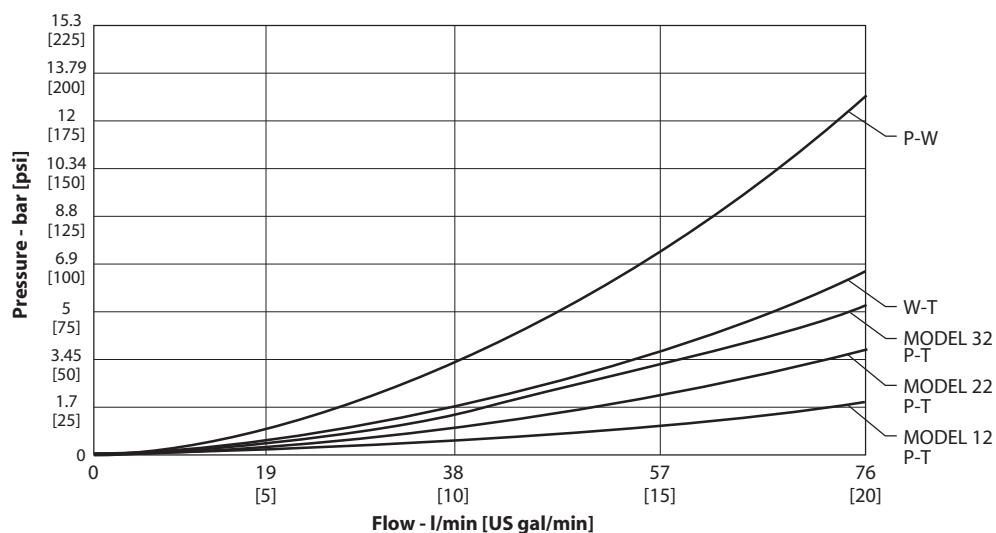

- All valves supplied with clevis end spools
- Power-beyond port machined and plugged (use whenever a downstream valve is required)
- Cast-iron body
- Chrome plated spools select fit to body for leakage control
- Paint color: black primer
- Load check for each spool to prevent drop before raise
- Individually boxed and labeled

#### DIMENSIONS

Directional Control Valves  
Technical Information  
**Model 1617**

**DESCRIPTION**

Single spool directional control valve with parallel circuitry. 38 l/min [10 US gal/min] maximum flow. 207 bar [3000 psi] maximum pressure.

**TYPICAL APPLICATIONS**

Lawn and garden tractors, mowers, small tractor loader attachments, sweepers, utility trucks, trenchers, agricultural equipment

**STANDARD FEATURES**

- All valves supplied with clevis end spools
- Power-beyond port machined and plugged (use whenever a downstream valve is required)
- Cast-iron body
- Chrome plated spools select fit to body for leakage control
- Paint color: black primer
- Load check for each spool to prevent load drop before raise
- Float conversion (add float detent kit **A** to standard **T** spool)
- Open transition valve
- Individually boxed and labeled

**OTHER FEATURES  
AVAILABLE**

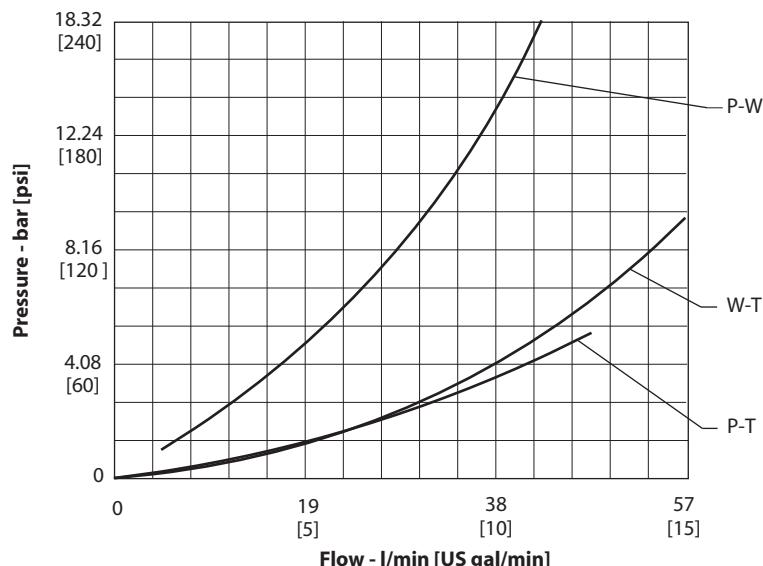

- Tang end spool for cable control
- Unidirectional or bidirectional drop-in work port orifice plates

# Directional Control Valves

## Technical Information

### Model 1627

#### DIMENSIONS

Directional Control Valves  
Technical Information  
**Model 1637**

**DESCRIPTION**

Three spool directional control valve with parallel circuitry. 38 l/min [10 US gal/min] maximum flow. 207 bar [3000 psi] maximum pressure.

**TYPICAL APPLICATIONS**

Lawn and garden tractors, mowers, small tractor loader attachments, sweepers, utility trucks, trenchers, agricultural equipment

**STANDARD FEATURES**

- All valves supplied with clevis end spools
- Power-beyond port machined and plugged (use whenever a downstream valve is required).
- Cast-iron body
- Chrome plated spools select fit to body for leakage control
- Paint color: black primer
- Load-check for each spool to prevent load drop before raise
- Float conversion (add float detent kit **A** to standard **T** spool)
- Open transition valve
- Individually boxed and labeled

**OTHER FEATURES  
AVAILABLE**

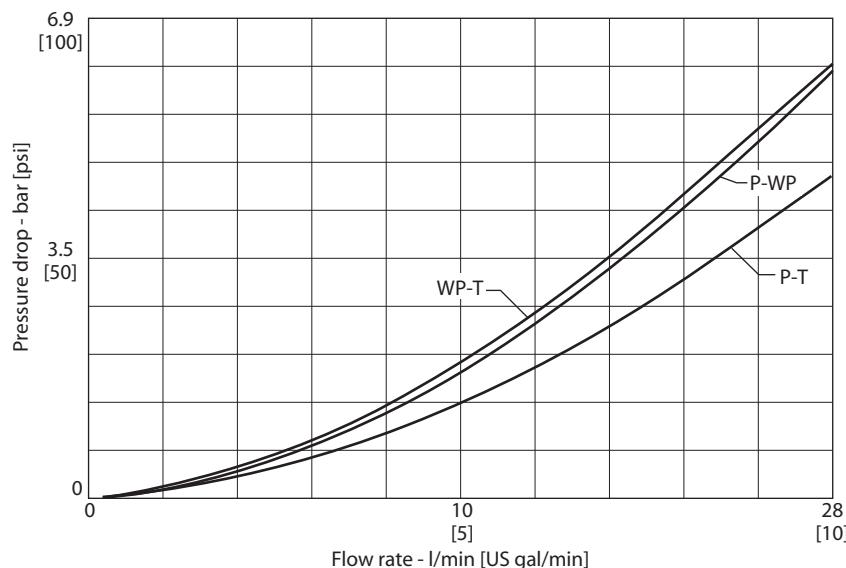

- Tang-end spool (for cable control)
- Unidirectional or bidirectional drop-in work port orifice plates

### Model 1637

#### PRESSURE DROP

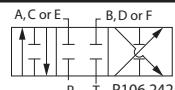

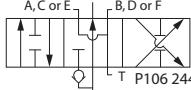

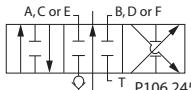

#### TECHNICAL DATA

<b>Maximum pressure</b>	207 bar	[3000 psi]
<b>Maximum tank line pressure</b>	69 bar	[1000 psi]
<b>Maximum oil flow</b>	38 l/min	[10 US gal/min]
<b>Spool travel in and out from neutral</b>	4.8 mm	[0.19 in]
<b>Spool travel to float position from neutral</b>	9.65 mm	[0.38 in]
<b>Maximum port leakage at 69 bar [1000 psi] 21 mm²/sec (cSt) [102 SUS]</b>	16 cm³/min	[1 in³/min]
<b>Maximum lift check leakage at 69 bar [1000 psi] 21 mm²/sec (cSt) [102 SUS]</b>	82 cm³/min	[5 in³/min]
<b>Minimum oil temperature</b>	-29° C	[-20° F]
<b>Maximum oil temperature</b>	82° C	[180° F]
<b>Ambient temperature range</b>	-29° to 60° C	[-20° to 140° F]
<b>Minimum viscosity</b>	6 mm²/sec (cSt)	[45 SUS]
<b>Maximum viscosity</b>	440 mm²/sec (cSt)	[2000 SUS]
<b>Fluid cleanliness per ISO 4406</b>	19/16	
<b>Typical spool effort: dry, full stroke</b>	231 N	[52 lbf]
<b>Weight</b>	5.44 kg	[12 lbs]

#### OPTIONS

##### Spool types

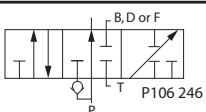

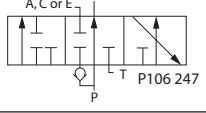

Code	Symbol	Description
C	 P106 242	4-way, 3-position Closed center Work ports blocked to tank in neutral position
O	 P106 244	4-way, 3-position Motor open center Work ports open to tank in neutral position
T	 P106 245	4-way, 3-position Open center Work ports blocked to tank in neutral position

## Technical Information

### Model 1637

#### OPTIONS (continued)

Code	Symbol	Description
V		3-way, 3-position Open center Work ports blocked to tank in neutral position (B, D, or F)
X		3-way, 3-position Open center Work ports blocked to tank in neutral position (A, C, or E)

#### Spool action

Code	Description	Code	Description
A	Spring centered, detent in float	N	Spring centered, detent in
D	3-position detent	S	Spring centered
L	Spring centered, detent out		

#### Relief valve

Code	Description
2	Direct-acting ball and spring <ul style="list-style-type: none"> <li>• 1 bar/l [50 psi/gal] rise</li> <li>• Standard setting 83 bar [1200 psi] crack pressure at 2.9 l/min [0.75 US gal/min]</li> <li>• Not for use on setting over 30 l/min [8 US gal/min]</li> <li>• Full flow setting at 138 bar [2000 psi]</li> </ul>
3	Pilot operated relief valve <ul style="list-style-type: none"> <li>• 0.4 bar/l [20 psi/gal] rise</li> <li>• No restrictions on setting up to 210 bar [3000 psi]</li> <li>• Standard setting 138 bar [2000 psi] crack pressure at 2.9 l/min [0.75 US gal/min]</li> </ul>

#### Porting

Inlet/outlet	3/4-16, SAE 8
Locations available	inlet-side, top, end outlet-top, end
Work ports	9/16-18, SAE-6

Power-beyond port machined and plugged. (Remove plug and install sleeve for power-beyond feature.)

#### Handles

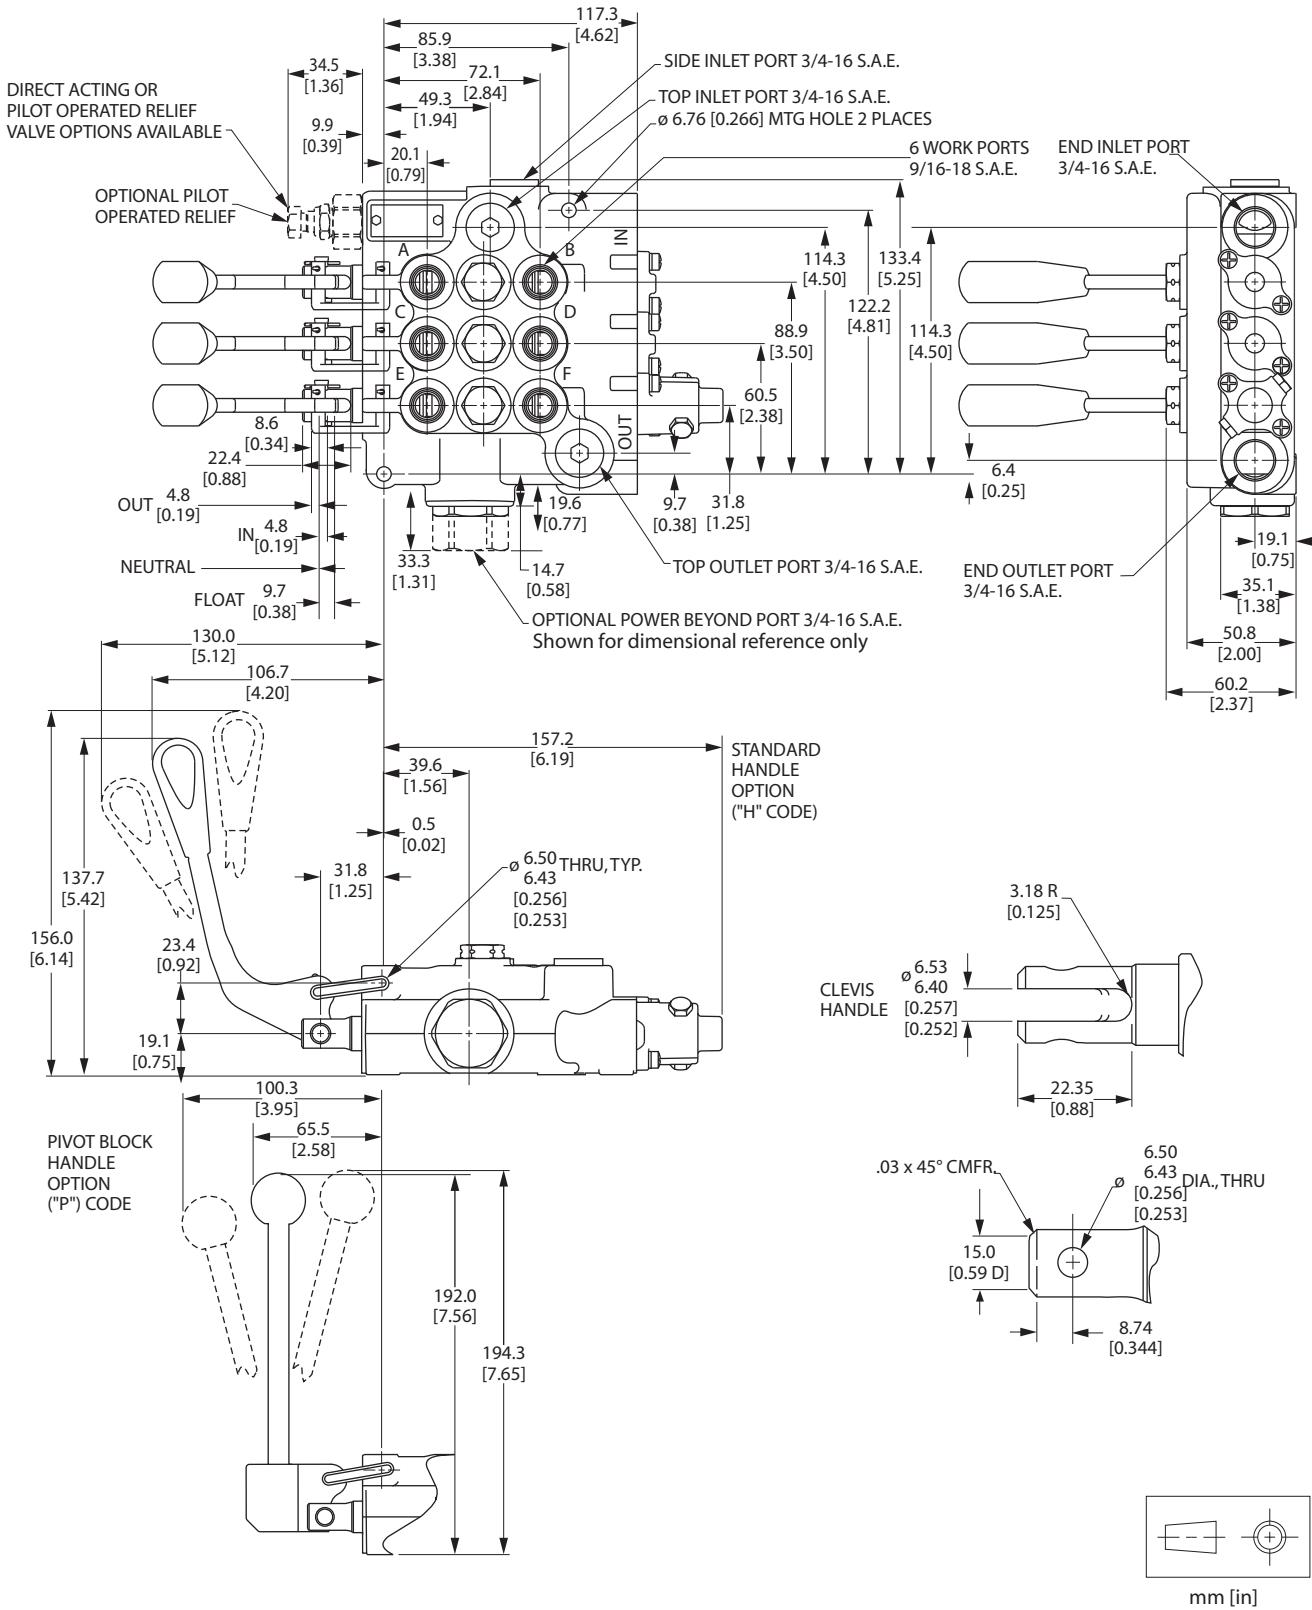

Code	Description
C	C-hook kit
H	Standard handle with C-hook kit
P	Pivot-block handle kit
N	No handles

#### DIMENSIONS

Directional Control Valves  
Technical Information  
**Model 1618**

**DESCRIPTION**

Single spool monoblock valve. 38 l/min [10 US gal/min] maximum flow. 207 bar [3000 psi] maximum pressure.

**TYPICAL APPLICATIONS**

Mowers, sweepers, fork lifts, aerial lift equipment, utility trucks, snow blades, trenchers, agricultural equipment

**STANDARD FEATURES**

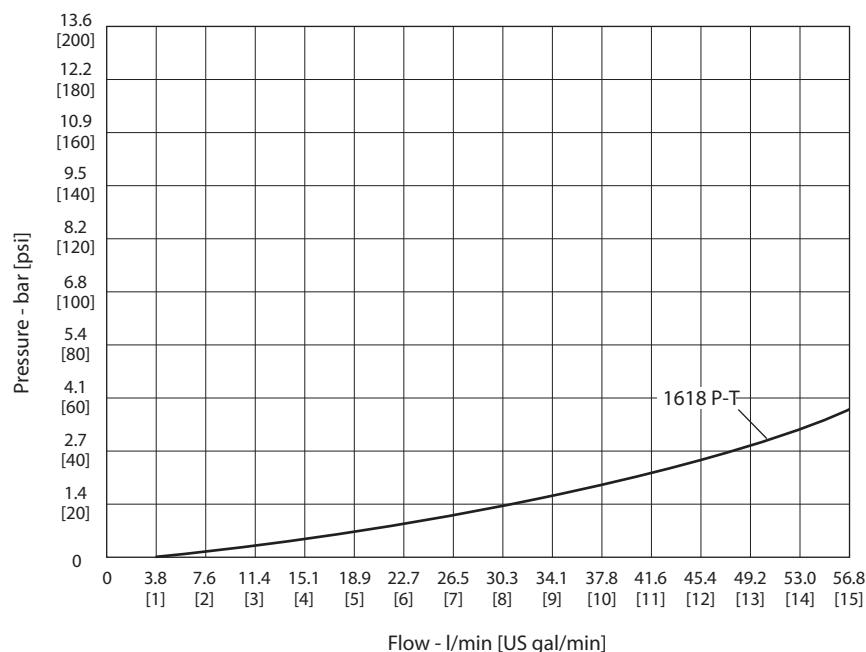

- All valves supplied with clevis end spools
- Power-beyond port machined and plugged (use whenever a downstream valve is required)
- Cast-iron body
- Chrome plated spools select fit to body for leakage control
- Pilot operated checks for low leakage
- Paint color: black primer
- Closed transition spool timing prevents load drop before raise
- Individually boxed and labeled

#### CIRCUIT TYPES

Work section order code (example)

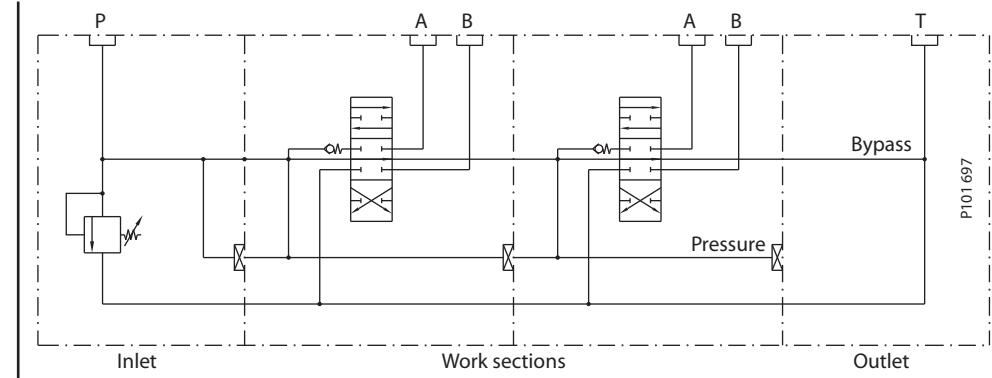

A100	1	A	E	2	A	1	A	B	A100	140/40*
------	---	---	---	---	---	---	---	---	------	---------

#### 1 Parallel circuit (no priority)

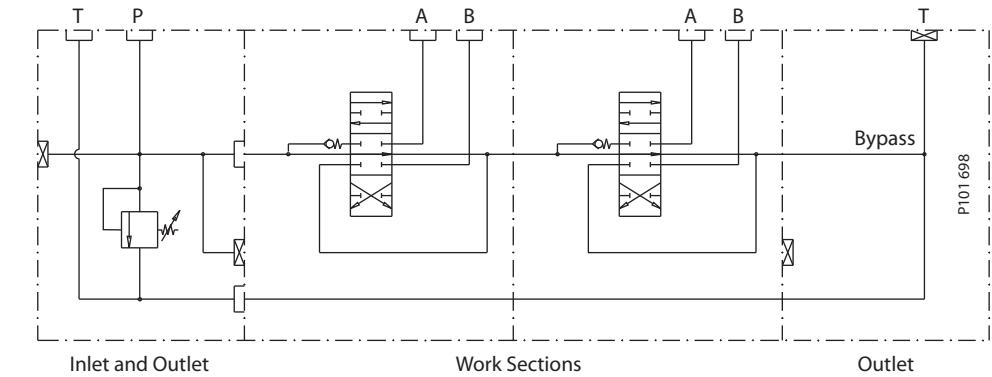

When two or more sections operate simultaneously, flow favors the lowest pressure.

#### 2 Tandem circuit (priority)

When two or more sections operate simultaneously, only the section closest to the inlet receives flow.

#### 3 Series circuit (no priority)

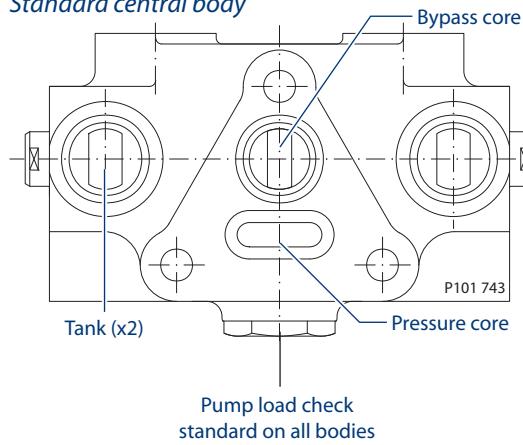

When two or more sections operate simultaneously, the section closest to the inlet receives flow. Return flow feeds the sections downstream.

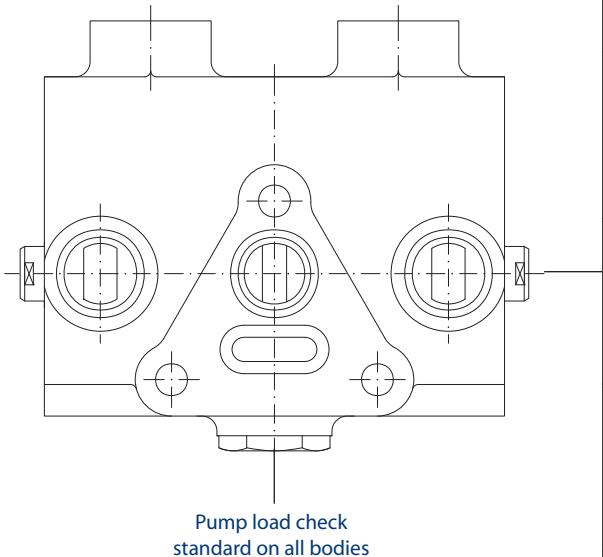

\* Default relief setting if not specified

#### SPOOL TYPES

*Standard central body*

*Central body for use with auxiliary valves*

Directional Control Valves  
Technical Information  
Model 1125

**TYPICAL APPLICATIONS**

Car transport haulers, small backhoes, utility trucks, and mini-excavators

**STANDARD FEATURES**

- All valves supplied with clevis end spools
- Power-beyond port machined and plugged (use whenever a downstream valve is required)
- Cast-iron body
- Chrome plated spools select fit to body for leakage control
- Load-check for each spool to prevent load drop before raise
- All porting options machined and plugged
- Individually boxed and labeled

## Directional Control Valves Technical Information Appendix 1 – Order forms

### 1125 ORDER FORM INSTRUCTIONS

An order form for Sauer-Danfoss SV 1125 hydraulic valve is shown on the next page.  
Photocopy this form and use it for ordering.

The order form is divided into fields.

Each module has its own field:

- 0: Combination pump and spool module, SVPB
- 1-6: Basic spool module, SVB
  - a: Mechanical actuation SVM
  - b: Spool action types, SVMB
  - c: Shock valve SVLP
- 7: Combination tank and spool module, SVAS

SVSB

- 9: Assembly kit SVAS

#### *Reordering*

The space at the top right-hand corner of the form is for Sauer-Danfoss to fill in. The code number for the whole of the 1125 group is entered here.

In the event of a repeat order all you have to do is enter the number Sauer-Danfoss has given on the initial confirmation of order.

Please state:

- Code number of all modules required
- Required setting (p) SVPR

Note:

If the 1125 is to be used with phosphate ester this must be stated on the order form.
